How to read an analog clock

The short, thick hand shows the hour. The long hand shows the minutes.

This clock shows 4:35. The hour hand sits between the 4 and the 5, so the hour is still 4. The minute hand points at the 7 — count around the face by 5s (or multiply: $7 \times 5 = 35$) to get 35 minutes. Read them together: 4:35. The small gray numbers outside the rim count the minutes for you.
